

A Forgotten Crisis?: Coverage of post-Katrina Gulf Coast Poverty Since 2005

A study of print media, February 13, 2009

By Freedman Consulting, LLC: Tom Freedman, Sam Gill, and Sam Feder

Introduction

This study examines U.S. print media coverage of Gulf Coast poverty in the wake of Hurricane Katrina. Articles published starting on December 1, 2005 — three months after the storm's first landfall in Louisiana — and ending on January 15, 2009, were examined. To conduct the study, we reviewed all stories in all papers available in Lexis-Nexis that mentioned key search terms. Our data show a consistent and significant decrease in coverage of Gulf Coast poverty in the context of Katrina. This is despite ongoing poverty news in the region, including a public housing crisis that has left an estimated 37,000 Gulf Coast residents living in FEMA trailers as of August, 2008.¹

Key findings include:

- Coverage in all U.S. newspapers and wires has declined steadily and significantly, reaching its lowest point in recent months
- While coverage of poverty in relation to politics increased from 2005 through 2008,² coverage of poverty in relation to Katrina declined
- Coverage of Katrina in general, while also declining, has been relatively high; coverage of poverty in relation to Katrina has made up a very small portion of overall Katrina coverage
- Coverage has declined not only in local newspapers far removed from the Gulf Coast, but in a collection of the 25 most read national and regional newspapers
- Coverage in Gulf Coast newspapers has declined far less rapidly than that in outside newspapers
- Coverage of major celebrities and Gulf Coast sports teams has exceeded and in most cases dwarfed coverage of poverty and Katrina

It appears that media interest in post-Katrina Gulf Coast poverty has significantly declined in all sources as we have moved further from the storm. Despite persistent poverty in the region, the issue is under addressed.

This study includes a description of the methodology, a presentation of the findings, and some key conclusions.

Methodology

The Lexis-Nexis database was used to find articles in print media with keywords related to Hurricane Katrina and poverty.

This was done in three parts.

In Part I, a Lexis search was conducted of "All U.S. Newspapers and Wires," a database containing major national newspapers, national wires, and local newspapers. Articles considered topical were those containing "Katrina" and one or more of the following: "poverty," "low income," "unemployment," and "public housing." Searches were divided into three-month increments. Results include stories from December 1, 2005, to January 15, 2009 (data was extrapolated to February 28, 2009). For comparison with coverage of Katrina generally, a search was performed collecting articles containing the term "Katrina" and, to distinguish results from those regarding persons named Katrina, one or more of "storm," "hurricane," "Rita," "New Orleans," "Louisiana," "Mississippi," or "Gulf." For comparison with coverage of poverty in relation to politics, a graph from an earlier study indicating the number of stories retrieved yearly from 2004-2008 using the terms "poverty," "politics," and "candidate" was included.

For Part II, the same search terms and date ranges were used as were used in Part I to gauge coverage of post-Katrina Gulf Coast poverty, but only 25 of the top-ranking newspapers in the U.S. by circulation were analyzed.³

For Part III, a search was conducted using the same terms and date ranges as used in Part I to examine post-Katrina Gulf Coast poverty, but only three major Gulf Coast newspapers were examined: the *Baton Rouge Advocate*, the *New Orleans Times Picayune*, and the *Biloxi Sun Herald*. Part I results for All U.S. Newspapers and Wires were then adjusted to exclude those three papers. Data from both searches was used to compare the change in national and local attention to post-Katrina poverty over time.

For Part IV, searches were conducted using All U.S. Newspapers and Wires over the same date ranges as Parts I, II, and III. Two searches were conducted. First, articles containing any one of the terms "Paris Hilton," "Brad Pitt," "Angelina Jolie," "Jennifer Aniston," or "Miley Cyrus" were collected. Second, articles were collected that covered Gulf Coast sports teams, using the terms "New Orleans Hornets," "LSU Tigers," "Mississippi Bulldogs," or a combination of "Saints" and one or more of "NFL" and "football" (to distinguish from the term "Saints" as applied to New Orleans generally). Data from both this search and Part I were then used to compare media attention towards celebrity and sports news and post-Katrina poverty over time.

PART I: Stories Mentioning Poverty and Katrina in All U.S Newspapers and Wires

Months	Documents returned for Katrina and poverty	Documents returned for Katrina in general
December 1, 2005-February 28, 2006	4,737	54,571
March 1, 2006-May 31, 2006	2,677	39,214
June 1, 2006-August 31, 2006	2,580	35,435
September 1, 2006-November 30, 2006	1,904	27,396
December 1, 2006-February 28, 2007	1,949	23,211

Sports and Celebrity News vs. Katrina and Poverty News

Conclusion

Hurricane Katrina initially attracted considerable media attention to the concerns of the poor living on the Gulf Coast. Coverage was devoted to those who fell into poverty due to the storm's effects and to those whose deprivation was further deepened.

About three and a half years later, coverage has reduced considerably. Stories in all newspapers across the country have declined, despite relatively high coverage of Katrina in general. Coverage of post-Katrina Gulf Coast poverty in all newspapers has also shown no relationship to coverage of political candidates and poverty, indicating that either candidates have not spoken about Katrina and poverty consistently or the news has not covered them doing so. Coverage in our country's major newspapers has also declined. The reduction is especially pronounced outside the Gulf Coast region: national coverage of Katrina-related poverty fell at a faster rate than local coverage following the hurricane. Finally, celebrity and Gulf Coast sports news has far exceeded coverage of the Gulf Coast's poor. While levels of sports and celebrity news have fluctuated significantly, based on the time of year and events in celebrities' lives, respectively, Katrina-related poverty coverage has basically simply declined.

Only 2 in 5 damaged affordable rental units in Louisiana will be replaced or repaired with recovery assistance, while the homeless population of New Orleans has been doubled by the storm.⁴ The question is, in the words of Ambassador James A. Joseph, Chairman of the LDRF Board of Directors, "How do we sustain the sense of community we shared during the hurricanes now that the intensity of the crisis is no longer as visible?"⁵ This study indicates one important step could be a renewed national focus on the problem of poverty in the Gulf Coast region.
